Simple principles for easier digestion.

THE TEMPLE METHOD

When in doubt, keep it simple

Build your meals around high-quality protein (like meat) paired with well-cooked vegetables. This combination is nutrient-dense, easy to digest, and supports overall health.

Why reduce raw veggies and cold food?

In TCM, cold foods and raw veggies can weaken the digestive fire ("Spleen Qi"), making it harder to extract nutrients and energy from food. These foods are best consumed in moderation, seasonally (e.g., in warmer months), and only if they are well-digested without causing bloating or fatigue. Use your best judgement when selecting recipes that work for your body.

A note on smoothies

Smoothies are a great way to start the day! They can be packed with nutrients and protein, and are a great way to take your daily powdered supplements. To optimize digestion, make sure:

- [ ] They are low glycemic - pair fruit with protein and healthy fats
- [ ] They are not ice-cold: avoid adding ice, if possible
- [ ] Drink slowly! "Chew" each mouthful of smoothie
- [ ] Use our smoothie recipes for inspiration!
