THE FEMININE GUT · FOOD STRATEGY

Your Food *Strategy*

A practical foundation for The TEMPLE Method.

Begin with nourishment. Your food strategy should help you eat enough, enjoy your meals, and create routines you can maintain. It can evolve as you and your practitioner review your experience.

01 Build your foundations

- Include a suitable protein source in your meals.
- Add vegetables, fruit, and other fiber-containing foods in forms and amounts you tolerate.
- Include carbohydrates and fats that suit your needs, activity, and preferences.
- Keep water accessible and establish an eating rhythm that works for your day.

02 Identify triggers thoughtfully

Use your food and symptom notes to discuss patterns with your practitioner. Avoid removing multiple food groups without a clear plan for adequate nutrition and review. Testing insights should be considered alongside your history and symptoms; they do not replace a medical diagnosis.

03 Make useful swaps

When helpful, replace frequent sugary drinks or heavily processed snack choices with satisfying alternatives. Frozen vegetables, canned beans, and other convenient packaged foods can still have a place in your kitchen.

THE TEMPLE METHOD

A personal plan, not a universal exclusion list

Gluten, dairy, grains, raw vegetables, and cold foods do not need to be removed by everyone. Follow medically necessary restrictions and your individual recommendations. Use cooked vegetables or smaller portions when they feel more comfortable.

THE FEMININE GUT · FOOD STRATEGY

Make It Work *for Your Life*

Small practical choices, repeated with care.

Use a simple meal formula

Protein + Vegetables + A suitable carbohydrate + Fat or flavor

For example: turkey, roasted squash, rice, and an olive-oil herb dressing.

Choose your preparation rhythm

Food prep

Prepare components, such as chopped vegetables, cooked protein, or grains, to combine later.

Meal prep

Prepare full meals in advance.

A mix of both

Often offers flexibility. Choose what fits your time and storage space.

Smoothies, when they suit you

Choose a tolerated liquid, a suitable protein source, and fruit or other ingredients that fit your plan. Temperature is a preference. Introduce recommended powders only according to your individual instructions; adding several at once can make it harder to identify what agrees with you.

Notice and discuss

- What meals keep you satisfied?
- Which ingredients, portions, or eating situations seem linked with discomfort?
- Are restrictions making it difficult to eat enough or enjoy food?
- What one adjustment would make next week easier?

YOUR IDENTITY IN PRACTICE

"I am a woman who makes room for nourishment. I can learn from my experience and ask for support."

Educational guidance. Follow your individual plan and discuss persistent symptoms or dietary restrictions with your healthcare provider. Avoid known allergens; recommendations should fit your needs.
